Overview 3

Score description - Telco Score Combined Gen. 4.1..... 3

 Prepaid customers 3

 Postpaid customers..... 4

Overview

The Finscore's combined telco score is a statistical model built on various MNO data sources – Data and Voice usage, Top-up Patterns, Location and Device Data and many more. Derived by the most advanced machine learning algorithms, the score has significant predictive power and can be used as either standalone models or in combination with exiting internal Social-Demographic and/or Credit Bureau models.

Score description - Telco Score Combined Gen. 4.1

Prepaid customers

Description

Telco Score trained on payment data from multiple loan products. Used for accessing probability of default for **Prepaid** SIM owners.
