Loandisk API Documentation

1. Introduction

The API supports JSON format only.

You can use the below API to make calls to your [Loandisk.com](https://www.loandisk.com) account. Since an account can have multiple branches, you will need to pass the **Branch Id** in the URL for each API call which identifies one of the branches in your account. The data will be transferred to that branch only. You can obtain the **Branch Id** and other details below.

2. First Steps

1. [Login](#)
2. Visit **Admin** → **Settings** → [API Settings](#)
3. Note down the following details:
 - **Auth Code**
 - **Public Key**
 - **Branch Id**

3. URL

`https://api-main.loandisk.com/{Public Key}/{Branch Id}/{Resource}`

{Resource} - Replace with the resource that needs to be added/updated/retrieved/deleted. For example, to post/put/get/delete borrower, replace with **borrower**. Must be all lowercase.

{Public Key} - Replace with the **Public Key** obtained at **Admin** → **Settings** → [API Settings](#).

{Branch Id} - Replace with the **Branch Id** obtained at **Admin** → **Settings** → [API Settings](#). Since an account can have multiple branches, you need to pass the **Branch Id** in each call. The data will be passed to the branch corresponding to the **Branch Id**.

4. Authentication

Visit **Admin** → **Settings** → [API Settings](#) and generate the **Auth Code**. This is used in the Authorization header. Before every call, you must pass the Auth Code in the header.

Content-Type: application/json

Authorization: Basic **Auth Code**

5. Limits

You can make 1000 requests in 5 minutes. Your IP address will be blocked if you reach this limit. This value is continually evaluated and the IP address is automatically unblocked after it falls below the limit.

You can make 10,000 requests per IP/Account per hour. If you would like to increase this limit, please contact us at support@loandisk.com.

Maximum of 20 failed login attempts allowed in 1 hour.

6. Responses

The API supports JSON format only.

Operation	Success Response	Error Response
GET	<pre>{ "response": { "TotalResults": 1200, "Page" => 1, "ReturnResults": 20, "Results": [{ "field": "field_value" }] } }</pre> TotalResults, Page, and ReturnResults will be 1 in if a single record is requested. If you are requesting multiple records, then you will need to specify the page number and results per page. In that case, it will return the page number and results found on that page. TotalResults will show the total records in the branch.	<pre>{ "error": { "type": "http", "code": "404", "message": "Not Foun } }</pre>
POST PUT	<pre>{ "response": { "Unique Id Field Name": "Unique Id Value" message string, // id of the record that has been added or updated message string, // for example "borrower_id": 1038292 } }</pre>	<pre>{ "response": { "Errors": [.....] } }</pre>
DELETE	<pre>{ "response": "deleted" }</pre>	<pre>{ "error": { "type": "http", "code": "404", "message": "Not Foun } }</pre>

7. Download SDK

PHP SDK

If you intend to use PHP to connect to Loandisk, you can download the [PHP SDK here](#).

Python SDK

If you intend to use Python to connect to Loandisk, you can download the [Python SDK here](#).

Ruby SDK

If you intend to use Ruby to connect to Loandisk, you can download the [Ruby SDK here](#).

Node.js SDK

If you intend to use Node.js to connect to Loandisk, you can download the [Node.js SDK here](#).

Java SDK

If you intend to use Java to connect to Loandisk, you can download the [Java SDK here](#).

8. Postman

Please see the sample screenshots below on how to connect via Postman.

POST | `https://api-main.loandisk.com/{Public Key}/{Branch Id}/borrower`

Params | Authorization | **Headers (11)** | Body | Pre-request Script | Tests | Settings

9. Sandbox

To create a sandbox environment, please visit [Admin](#) → **Manage Branches** → **Branches** → **Add Branch** button. There, please create a branch with the name Test Branch. In every API call, you have to specify the **{Branch Id}** for which you would like to access or modify the records. All the branches are separate to each other and do not share any data. You can do all your testing in the Test Branch by specifying the **{Branch Id}** of the Test Branch. Once you have completed your testing, you can switch to production by changing the **{Branch Id}** to another branch where you intend to hold your production records. To see your **{Branch Id}**, please visit **Admin** → **Settings** → [API Settings](#).

10. Terms of Services

In using the API, you agree to the [Terms of Services](#) and [Privacy](#) policies. Copyright @ 2025 Loandisk.

11. Borrower

https://api-main.loandisk.com/{Public Key}/{Branch Id}/**borrower**

Action	Methods	URL Parameters	Description
Get single Borrower in Branch	GET	/borrower/{ borrower_id }	Specify the borrower_id of the Borrower that you would like to retrieve.
Get multiple Borrowers in Branch	GET	/from/{ Page Number }/count/{ Number of Results }	Specify the page number and the number of results per page for pagination.
Get borrower from borrower_mobile field	GET	/borrower_mobile/{ borrower_mobile }	Specify the borrower_mobile of the borrower.
Get borrower from borrower_email field	GET	/borrower_email/{ borrower_email }	Specify the borrower_email address of the borrower.
Get borrower from borrower_unique_number field	GET	/borrower_unique_number/{ borrower_unique_number }	Specify the borrower_unique number of the borrower.
Get borrower from borrower_dob field	GET	/borrower_dob/{ borrower_dob }	Specify the borrower_dob of the borrower in mm-dd format for example 2019-12-28.
Get branch_id of borrower	GET	/get_borrower_branch_id/{ borrower_id }	Specify the borrower_id of the borrower to get the branch_id. This is useful for finding borrowers in specific branches.
Total Count of all Borrowers in Branch	GET	/total_count	Returns the total number of borrowers in the branch.
Add a new Borrower	POST	None	
Update an existing Borrower	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify borrower_id of the Borrower in the JSON Parameters below.

Move Borrower to Another Branch	PUT	/{{ borrower_id }}/move_branch/{{ branch_id }}	Specify the new branch of the borrower. The borrower will be moved to this branch_id . For branch_id if successful.
Delete a Borrower	DELETE	/{{ borrower_id }}	Specify the borrower_id of the Borrower that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
borrower_id		Extract the values from GET borrower	Unique Id of Borrower. For PUT requests, to specify this in the body parameter. For GET and DELETE, this should be in the URL. Ignore for POST requests.
borrower_country	Required	Click here to see the allowed Country values.	Country
borrower_firstname	Optional	Any	First Name
borrower_lastname	Optional	Any	Middle / Last Name
borrower_business_name	Optional	Any	Business Name
borrower_unique_number	Optional	Any	Unique Number
borrower_gender	Optional	<u>Select one of following values:</u> Male Female Nonbinary Other Decline to state	Gender
borrower_title	Optional	<u>Select one of following values:</u> 1 2 3 4 5 6 7	Title 1=Mr. 2=Mrs. 3=Miss 4=Ms. 5=Dr. 6=Prof. 7=Rev.
borrower_mobile	Optional	Numbers only	Mobile
borrower_email	Optional	Email Address	Email
borrower_dob	Optional	mm/dd/yyyy	Date of Birth
borrower_address	Optional	Any	Address
borrower_city	Optional	Any	City
borrower_province	Optional	Any	Province / State
borrower_zipcode	Optional	Any	Zipcode
borrower_landline	Optional	Any	Landline Phone
borrower_working_status	Optional	<u>Select one of following values:</u> Employee Government Employee	Working Status

14. Borrower Restrictions

https://api-main.loandisk.com/{Public Key}/{Branch Id}/borrower_restrictions

Put a restriction on a borrower or the entire branch

Action	Methods	URL Parameters	Description
Get Borrower Restrictions on a borrower	GET	/ {borrower_id}	Specify the branch and branch_id for the borrower for which you would like to get the borrower restriction values
Place Borrower Restriction on a borrower or branch	PUT		Specify the branch and branch_id for the borrower for which you would like to place restrictions in the Body Parameters The borrower_id can be found in Borrower if you select restrictions or branch , the restrictions will apply on all borrowers in the branch and the borrower_id will be

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
borrower_id	Required	Extract the values from Borrower	Borrower
max_number_of_open_loans	Optional	Numbers only	Maximum Number of Loans Allowed
max_prin_out_amount	Optional	Numbers or Decimals(4 places) only	Maximum Principal Outstanding Amount Allowed
max_total_out_amount	Optional	Numbers or Decimals(4 places) only	Maximum Total Outstanding Amount Allowed
max_open_principal_release_d_amount	Optional	Numbers or Decimals(4 places) only	Maximum Principal Released Amount Allowed
max_all_principal_released_amount	Optional	Numbers or Decimals(4 places) only	Maximum Principal Released Amount Allowed
do_not_allow_new_loan_if_default_loan	Optional	Select one of following values: 1	If Borrower has a default loan, stop any new loans 1=Yes
stop_all_new_loans	Optional	Select one of following values: 1	Stop any New Loans for Borrower? 1=Yes
stop_all_new_loans_date	Optional	mm/dd/yyyy	Stop Loans Until following Date?

stop_repayments_fully_paid_loans	Optional	<u>Select one of following values:</u> 1	Do not allow any repayments for loans are Fully Paid? 1=Yes
stop_repayments_defaulted_loans	Required	<u>Select one of following values:</u> 1	Do not allow any repayments for loans are Defaulted? 1=Yes
stop_repayments_restructured_loans	Required	<u>Select one of following values:</u> 1	Do not allow any repayments for loans are Restructured? 1=Yes
min_savings_balance	Optional	Numbers or Decimals(4 places) only	Minimum Savings Required for New
br_description	Optional	Any	Description
restrict_type	Required	<u>Select one of following values:</u> borrower branch	Restrict borrower=Borrower branch=All Borrowers in this Branch

15. Loan

https://api-main.loandisk.com/{Public Key}/{Branch Id}/loan

Action	Methods	URL Parameters	Description
Get single Loan in Branch	GET	/loan_id	Specify the loan_id of the loan that you would like to return.
Get multiple Loans in Branch	GET	/from/{Page Number}/count/{Number of Results}	Specify the page number and the number of results per page for pagination.
Get loan from loan_application_id field	GET	/loan_application_id/{loan_application_id}	Specify the loan_application_id of the loan for which you would like to return the details. This is the Loan # that you receive when you add a new loan to the Loandisk website.
Get all loans of borrower	GET	/borrower/{borrower_id}/from/{Page Number}/count/{Number of Results}	Specify the borrower_id of the borrower for which you would like to return the list of loans. Also, specify the page number and the number of results per page for pagination.
Get multiple disbursements in Branch	GET	/get_multiple_disbursements/from/{Page Number}/count/{Number of Results}	Get all the multiple disbursements in a branch. Also, specify the page number and the number of results per page for pagination.
Get multiple disbursements from loan_id field	GET	/get_multiple_disbursements/{loan_id}	Specify the loan_id of the loan for which you would like to get the multiple disbursements if any.
Get original loan schedule	GET	/original_loan_schedule/{loan_id}/from/{Page Number}/count/{Number of Results}	Specify the loan_id of the loan for which you would like to return the original loan schedule. Also, specify the page number and the number of results per page for pagination.
Get adjusted loan schedule	GET	/adjusted_loan_schedule/{loan_id}/from/{Page Number}/count/{Number of Results}	Specify the loan_id of the loan for which you would like to return the adjusted loan schedule. Also, specify the page number and the number of results per page for pagination.

Get branch_id from loan_id field	GET	/get_branch_id/{loan_id}	Specify the loan_id for which you like to return the branch_id. This is useful if the branch_id does not exist in your account, you are receiving an error when you query a loan in a certain branch.
Get branch_id from loan_application_id field	GET	/get_branch_id_from_loan_application_id/{loan_application_id}	Specify the loan_application_id for which you like to return the branch_id. The loan_application_id is the Loan # that you receive when you add a loan to the Loandisk website. This is useful if the loan does not exist in your account but you are receiving a 404 error when you query the loan in a certain branch_id.
Add a new Loan	POST	None	
Update an existing Loan	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify loan_id of the Loan in the JSON Body Parameter below.
Delete a Loan	DELETE	/ {loan_id}	Specify the loan_id of the Loan that you want to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
loan_id		Extract the values from GET loan	Unique Id of Loan For PUT requests, to specify this in the JSON body parameter. For GET and DELETE, this must be in the URL. Ignore for POST requests.
loan_product_id	Required	<u>Select one of following values:</u> 325946 310445 245685 244322 244329 244323	Loan Product 325946=*DUMM 310445=ANGAT KABUHAYAN PRO (AKAP) LOAN 245685=GROUP 244322=PERSON (PL)

17. Due Loans

https://api-main.loandisk.com/{Public Key}/{Branch Id}/due_loans

Due Loans for the Branch

Action	Methods	URL Parameters	Description
Due Loans	POST	None	Specify the page number and the number of results per page for pagination. Also, you must specify the from_collection_date (From Date) and to_collection_date (To Date) from the branch search parameters.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
from	Required	Number	Specify the page number. Please loop through results to find the due loans. First, set from and count below and post. The system will return the TotalResults variable which is the number of loans found in the search parameters. For example, let's say TotalResults is 2000. Then specify from as 1 and count as 5. If you get no results, it means no loans are due between the specified dates for the first page. Then you can set from as 2 (2nd page) and count as 500 and search again. This will give you the second set of results and so on until you have searched for from (2000/500) which gives you the last page. For example, if TotalResults was 2000 and count is 500, you would search until from is 4 (roundup(2000/500) is 4 pages in total).
count	Required	Number	Specify the number of results per page.
from_collection_date	Required	mm/dd/yyyy	From Date
to_collection_date	Required	mm/dd/yyyy	To Date

18. Add Additional Disbursement to Existing Loan

https://api-main.loandisk.com/{Public Key}/{Branch Id}/additional_disbursement

Action	Methods	URL Parameters	Description
Add Additional Disbursement to Existing Loan	POST	/loan_id	Specify the loan_id for the loan you would like to add a disbursement to. You can add an additional disbursement to a loan that was added via the Loan POST call by combining multiple disbursements into one loan. You can add the same parameters as for the Loan. The following parameters will be included in the payload as they are already included in the payload: loan_id, loan_processor_id, borrower_id, loan_application_id, automatic_payment_id, after_maturity_extension_id, loan_status_id.
Edit Additional Disbursement to Existing Loan	PUT		Specify the loan_id for the loan you want to edit the JSON Body Parameters. You can only edit the additional disbursement that was added via the above POST call. You can edit the same parameters as for the Loan. The following parameters will be included in the payload as they are already included in the payload: loan_id, loan_processor_id, borrower_id, loan_application_id, automatic_payment_id, after_maturity_extension_id, loan_status_id.

19. Step 1: Choose Settlement Values

https://api-main.loandisk.com/{Public Key}/{Branch
Id}/early_settlement_choose_values

Action	Methods	URL Parameters	Descript
Choose Settlement Values	POST	/ {loan_id}	Specify the loan_ loan for which yo like to view early values.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Descript
early_settlement_date	Used for POST. Required	mm/dd/yyyy	Specify the Early Settlement Dat mm/dd/yyyy for loan for which yo like to do early se The system will g array of values fo Fees, and Penalty • Pro-Rata Balan Settlement Dat • Due Balance u Collection date • Due Balance u Collection date • Total Pending E You can then choi values in the early_settlemer an_schedule end below to see the loan schedule.

20. Step 2: View Proposed Loan Schedule with Settlement Values

https://api-main.loandisk.com/{Public Key}/{Branch Id}/early_settlement_view_loan_schedule

Action	Methods	URL Parameters	Description
View Proposed Loan Schedule with Settlement Values	POST	/ {loan_id}	Specify the loan_id for which you like to view the proposed loan schedule based on settlement values. You can then choose values in the early_settlement_view_loan_schedule endpoint to confirm the early settlement.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
early_settlement_date	Used for POST. Required	mm/dd/yyyy	Specify the Early Settlement Date for loan_id
interest_paid_type	Used only for POST Optional	Choose one of the below values: - add_payments_until_early_settlement_date - add_payments_until_next_collection_date - add_total_payments_on_the_loan	Specify how you want to include the interest payments (if any) on the loan. - add_payments_until_early_settlement_date: Payments until Settlement Date - add_payments_until_next_collection_date: Payments until Collection Date - add_total_payments_on_the_loan - Add total payments on the loan. If you do not specify a value, the payments on the early_settlement_date will be counted.
interest_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total net due for the early settlement. You can also specify one of the Interest values in the early_settlement_view_loan_schedule endpoint or your own value.

			If you do not specify a value, the system will assume that interest be 0.
penalty_paid_type	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the penalty payments (if any) on the loan • add_payments_until_early_settlement_date - Payments until Settlement Date • add_payments_until_next_collection_date - Payments until Collection Date • add_total_payments_on_the_loan - Add Total Payments on the loan If you do not specify a value, the payment the early_settlement will be counted.
penalty_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total net due for the early settlement. You can use one of the Penalty values the early_settlement_values endpoint or your own value. If you do not specify a value, the system will assume that penalty be 0.
fee_id_paid_type_14283	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the PRE-TERMINATION FEE payments (if any) on the loan. • add_payments_until_early_settlement_date - Payments until Settlement Date • add_payments_until_next_collection_date - Payments until Collection Date • add_total_payments_on_the_loan - Add Total Payments on the loan If you do not specify a value, the payment the

			early_settlement will be counted.
fee_id_due_14283	Used only for POST Optional	Numbers or Decimals(4 places) only	PRE-TERMINATION Specify the total TERMINATION FEE due for the early settlement. You can use one of the values early_settlement, lues endpoint or your own value. If you do not specify a value, the system will assume that PRE-TERMINATION FEE be 0.

21. Step 3: Edit Loan Schedule with the Proposed Loan Schedule

`https://api-main.loandisk.com/{Public Key}/{Branch Id}/early_settlement_edit_schedule`

Action	Methods	URL Parameters	Description
Edit Loan Schedule with the Proposed Loan Schedule	POST	<code>/loan_id</code>	Specify the loan_id for which you like to perform early settlement.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
early_settlement_date	Used for POST. Required	mm/dd/yyyy	Specify the Early Settlement Date for loan_id
interest_paid_type	Used only for POST Optional	Choose one of the below values: - add_payments_until_early_settlement_date - add_payments_until_next_collection_date - add_total_payments_on_the_loan	Specify how you want to include the interest payments (if any) on the loan - add_payments_until_early_settlement_date: Payments until Settlement Date - add_payments_until_next_collection_date: Payments until Collection Date - add_total_payments_on_the_loan: Add Total Payments on the loan If you do not specify a value, the payment early_settlement_date will be counted.
interest_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total net due for the early settlement. You can choose one of the Interest types from the early_settlement_types endpoint or your own value. If you do not specify a value, the system will assume that interest will be 0.
penalty_paid_type	Used only for POST Optional	Choose one of the below values:	Specify how you want to include the penalty payments (if any)

		• add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	loan • add_payments_until_early_settlement_date Payments until Settlement Date • add_payments_until_next_collection_date Payments until Collection Date • add_total_payments_on_the_loan - Add Total Payments on the loan If you do not specify a value, the payment will be counted the early_settlement_date.
penalty_due	Used only for POST Optional	Numbers or Decimals(4 places) only	Specify the total net due for the early settlement. You can choose one of the Penalty values or the early_settlement_date endpoint or your own value. If you do not specify a value, the system will assume that penalty will be 0.
fee_id_paid_type_14283	Used only for POST Optional	Choose one of the below values: • add_payments_until_early_settlement_date • add_payments_until_next_collection_date • add_total_payments_on_the_loan	Specify how you want to include the PRE-TERMINATION FEE payments (if any) on the loan. • add_payments_until_early_settlement_date Payments until Settlement Date • add_payments_until_next_collection_date Payments until Collection Date • add_total_payments_on_the_loan - Add Total Payments on the loan If you do not specify a value, the payment will be counted the early_settlement_date.
fee_id_due_14283	Used only for POST Optional	Numbers or Decimals(4 places) only	PRE-TERMINATION FEE Specify the total PRE-TERMINATION FEE due for the early settlement. You can choose one of the values

			early_settlement_lues endpoint or own value. If you do not specify a value, the system will assume that PRE-TERMINATION FEE be 0.
--	--	--	---

22. Delete Early Settlement

https://api-main.loandisk.com/{Public Key}/{Branch Id}/early_settlement_delete

Action	Methods	URL Parameters	Descript
Delete early settlement on loan	DELETE	/ {loan_id}	Specify the loan_ loan for which yo like to delete the settlement.

23. Repayment

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/repayment>

Action	Methods	URL Parameters	Description
Get single Repayment in Branch	GET	/ {repayment_id}	Specify the repayment_id of the Repayment you would like to return
Get multiple Repayments in Branch	GET	/from/{Page Number}/count/{Number of Results}	Specify the page number and the number of results per page for pagination.
Get all repayments of loan	GET	/loan/{loan_id}/from/{Page Number}/count/{Number of Results}	Specify the loan_id of the loan for which you would like to return the repayments. Also, specify the page number and the number of results per page for pagination.
Add a new Repayment	POST	None	
Update an existing Repayment	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify repayment_id of the Repayment in the Body Parameters
Delete a Repayment	DELETE	/ {repayment_id}	Specify the repayment_id of the Repayment you would like to delete

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
repayment_id		Extract the values from GET repayment	Unique Id of Repayment. For PUT requests, to specify this in the body parameter. For GET, POST and DELETE, this should be in the URL. Ignored for POST requests.
loan_id	Used only for POST	Extract the values from GET loan	
repayment_amount	Optional	Numbers or Decimals(2 places) only	Repayment Amount

loan_repayment_method_id	Required	Extract the values from GET repayment_method	Repayment Method
repayment_collected_date	Required	mm/dd/yyyy	Collection Date
collector_id	Required	Extract the values from GET collector	Collected By
repayment_backdate	Optional	<u>Select one of following values:</u> 1	Backdate Repayment 1=Backdate Repayment
repayment_backdated_date	Optional	mm/dd/yyyy	Apply Repayment Backdated Date Valid only if repayment_backdate set to 1
repayment_adjust_remaining_schedule	Optional	<u>Select one of following values:</u> 1	Recalculate remaining schedule with balance principal amount 1=Recalculate remaining schedule with balance principal amount
repayment_adjust_remaining_schedule_pro_rata	Optional	<u>Select one of following values:</u> 1 2	Adjust interest or basis until the Collection Date 1=Adjust interest rate basis until the Collection Date set above and keep interest 2=Adjust interest rate basis until the Collection Date set above and remove interest Valid only if repayment_adjust_remaining_schedule is set to 1 or 2
repayment_manual_composition	Optional	<u>Select one of following values:</u> 1	Allocate repayment manually based on the below values 1=Allocate repayment amount manually based on the below values
principal_repayment_amount	Optional	Numbers or Decimals(2 places) only	Principal Amount Valid only if repayment_manual_composition is set to 1
interest_repayment_amount	Optional	Numbers or Decimals(2 places) only	Interest Amount Valid only if repayment_manual_composition is set to 1
fees_repayment_amount	Optional	Numbers or Decimals(2 places) only	Fees Amount Valid only if repayment_manual_composition is set to 1

penalty_repayment_amount	Optional	Numbers or Decimals(2 places) only	Penalty Amount Valid only if <u>repayment_mar</u> position is set t
loandisk_system_date	Optional	Any	Loandisk System Valid only for G requests
borrower_access_ids	Optional	Any	Loan Officer Acce Valid only for G requests
repayment_description	Optional	Any	Description / Corr
dea_cash_bank_account	Optional	<u>Select one of following values:</u> 0	Cash/Bank 0=Cash

24. Repayment Method

https://api-main.loandisk.com/{Public Key}/{Branch Id}/repayment_method

Action	Methods	URL Parameters	Description
Get single Repayment Method in Branch	GET	/loan_repayment_method_id	Specify the loan_repayment_id of the Repayment Method that you want to return.
Get multiple Repayment Methods in Branch	GET	/from/{Page Number}/count/{Number of Results}	Specify the page number and the number of results per page for pagination.
Add a new Repayment Method	POST	None	
Update an existing Repayment Method	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify loan_repayment_id of the Repayment Method in the JSON Parameters below.
Delete a Repayment Method	DELETE	/loan_repayment_method_id	Specify the loan_repayment_id of the Repayment Method that you want to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
loan_repayment_method_id		Extract the values from GET repayment_method	Unique Id of Repayment Method. For PUT requests, to specify this in the JSON body parameter. For GET and DELETE, this should be in the URL. Ignored for POST requests.
loan_repayment_method_name	Required		Name

25. Collected By

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/collector>

Action	Methods	URL Parameters	Description
Get single Collected By in Branch	GET	/ {collector_id}	Specify the collector_id of the Collected By that you would like to retrieve.
Get multiple Collected Bys in Branch	GET	/from/{Page Number}/count/{Number of Results}	Specify the page number and the number of results per page for pagination.
Add a new Collected By	POST	None	
Update an existing Collected By	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify collector_id of the Collected By in the Body Parameters
Delete a Collected By	DELETE	/ {collector_id}	Specify the collector_id of the Collected By that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
collector_id		Extract the values from GET collector	Unique Id of Collector. For PUT requests, to specify this in the body parameter. For POST and DELETE, this must be in the URL. Ignore for POST requests.
collector_name	Required	Any	Collector Name
collector_branch_ids	Used only for POST	<u>Multi Select:</u> [59679, 87340,]	Branch 59679=MALOLOS BRANCH 87340=Test Branch

26. Advanced Search Repayments

https://api-main.loandisk.com/{Public Key}/{Branch Id}/advanced_search_repayments

Get Repayments for the Branch by doing an Advanced Search

Action	Methods	URL Parameters	Description
Search Repayments	POST	None	Specify the page number and the number of results per page for pagination. Also, you must specify at least 1 of the below optional search parameters.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
from	Required	Number	Specify the page number
count	Required	Number	Specify the number of results per page
repayment_borrower_name	Optional	Any	Borrower Name or Name or Group Name
loan_application_id	Optional	Any	Loan Unique Number
repayment_method_id	Optional	Extract the values from GET repayment_method	Repayment Method. Separate multiple values with

repayment_search_from_amount	Optional	Numbers or Decimals(2 places) only	From Amount
repayment_search_to_amount	Optional	Numbers or Decimals(2 places) only	To Amount
repayment_search_from_date	Optional	mm/dd/yyyy	From Date
repayment_search_to_date	Optional	mm/dd/yyyy	To Date

27. Bulk Repayments

`https://api-main.loandisk.com/{Public Key}/{Branch Id}/bulk_repayments`

Submit up to 5,000 repayments in a single API call. Repayments are queued for background processing. Use the GET endpoint to check the progress and results of a bulk repayment job.

Sample POST Payload:

```
{
  "repayments": [
    {
      "loan_id": 123,
      "repayment_amount": 500.00,
      "repayment_collected_date": "2026-04-01",
      "loan_repayment_method_id": 1,
      "collector_id": 5,
      "repayment_description": "Monthly payment"
    },
    {
      "loan_id": 456,
      "repayment_amount": 250.00,
      "repayment_collected_date": "2026-04-01",
      "loan_repayment_method_id": 1,
      "collector_id": 5
    }
  ]
}
```

Action	Methods	URL Parameters	Description
Check Bulk Repayment Job Status	GET	/ {job_id}	Check the progress of a bulk repayment job. Returns the status, total records processed, successful, and failed.
Get Bulk Repayment Job Results with Pagination	GET	/ {job_id} /from/ {Page Number} /count/ {Number of Results}	When the job is complete, this endpoint returns per-row results including success status for each record. Specify the page number and the number of records per page for pagination.
Submit Bulk Repayments	POST	None	Submit an array of repayments (maximum 5,000 per request) for background processing. Return the job_id to track progress.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Descript
repayments	Required	Array of repayment objects (max 5,000)	An array of repay objects. Each obj contains the field
repayments[].loan_id	Required	Number	The Loan ID. Extr GET loan
repayments[].repayment_a mount	Required	Decimals (2 places)	The repayment a
repayments[].repayment_co llected_date	Required	YYYY-MM-DD	The date the repa was collected. Mu YYYY-MM-DD form
repayments[].loan_repayme nt_method_id	Required	Extract from GET repayment_method	The repayment m
repayments[].collector_id	Required	Extract from GET collector	The collector ID
repayments[].repayment_d escription	Optional	Any text	Description or no repayment
repayments[].repayment_b ackdate	Optional	0 or 1	Set to 1 to backd repayment. Defa
repayments[].repayment_b ackdated_date	Optional	YYYY-MM-DD	The backdated da Required if repayment_back Must be in YYYY-M format.
repayments[].repayment_a djust_remaining_schedule	Optional	0 or 1	Set to 1 to recal remaining loan sc Default: 0
repayments[].repayment_a djust_remaining_schedule_p ro_rata	Optional	0, 1, or 2	Pro-rata adjustme method. Only use repayment_adjus g_schedule is 1. I
repayments[].repayment_m anual_composition	Optional	0 or 1	Set to 1 to manu how the repayme allocated to princ interest, fees, and Default: 0
repayments[].principal_repa yment_amount	Optional	Decimals (2 places)	Amount allocated principal. Require repayment_manu ition is 1. The sur principal + intere + penalty must e repayment_amo
repayments[].interest_repa yment_amount	Optional	Decimals (2 places)	Amount allocated interest. Required repayment_manu ition is 1.
repayments[].fees_repayme nt_amount	Optional	Decimals (2 places)	Amount allocated Required if repayment_manu ition is 1.
repayments[].penalty_repay ment_amount	Optional	Decimals (2 places)	Amount allocated penalty. Required repayment_manu ition is 1.

repayments[].dea_cash_bank_account	Optional	0	Cash/Bank 0=Cash
------------------------------------	----------	---	---------------------

28. Saving

<https://api-main.loandisk.com/{Public Key}/{Branch Id}/saving>

Action	Methods	URL Parameters	Description
Get single Saving in Branch	GET	/savings_id	Specify the savings_id of the Saving that you would like to return.
Get multiple Savings in Branch	GET	/from/{Page Number}/count/{Number of Results}	Specify the page number and the number of results per page for pagination.
Get all savings of borrower	GET	/borrower/{borrower_id}/from/{Page Number}/count/{Number of Results}	Specify the borrower_id of the borrower for which you would like to return savings accounts. Also, specify the page number and the number of results per page for pagination.
Add a new Saving	POST	None	
Update an existing Saving	PUT	None Warning: For PUT requests, you must <u>specify all of the data</u> that should exist including those fields that you do not want to update. So first issue a GET request and then input all of that data into the PUT request along with the updated fields. If you specify only the fields you want to update, other optional fields will be updated with empty values.	You must specify savings_id of the Saving in the JSON Body Parameters below.
Delete a Saving	DELETE	/savings_id	Specify the savings_id of the Saving that you would like to delete.

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Description
savings_id		Extract the values from GET saving	Unique Id of Saving. For PUT requests, to specify this in the JSON body parameter. For POST and DELETE, this must be in the URL. Ignore for POST requests.
savings_product_id	Required	Select one of following values:	Savings Product
borrower_id	Used only for POST	Extract the values from GET borrower	Borrower

savings_account_number	Required	Any	Savings Account
savings_fees	Optional	<u>Multi Select:</u> []	Select the saving should apply to the account
susu_daily_contribution_amount	Optional	Numbers or Decimals(2 places) only	Daily Contribution
savings_description	Optional	Any	Description
savings_balance	Optional	Numbers or Decimals(2 places) only	Savings Balance , Valid only for G requests
savings_status	Optional	Active Zero Balance Overdrawn Closed	Savings Status Valid only for G requests

29. Advanced Search Savings

`https://api-main.loandisk.com/{Public Key}/{Branch Id}/advanced_search_savings`

Get Savings for the Branch by doing an Advanced Search

Action	Methods	URL Parameters	Descript
Search savings	POST	None	Specify the page and the number c per page for pagi Also, you must sp least 1 of the belo optional search p

JSON Body Parameters for POST and PUT for Add and Update. JSON Results for GET.

Fields	Required	Allowed Values	Descript
from	Required	Number	Specify the page
count	Required	Number	Specify the numb results per page
savings_borrower_name	Optional	Any	Borrower Name o Name or Group N
savings_account_number	Optional	Any	Savings Account
savings_product_id	Optional		Savings Products Separate multiple with
savings_status_ids	Optional	1 4 2 3	Savings Status 1: Active 4: Zero Balance 2: Overdrawn 3: Closed Separate multiple with

30. Saving Transaction

https://api-main.loandisk.com/{Public Key}/{Branch Id}/saving_transaction

Action	Methods	URL Parameters	Description
